ALI HAIDER SIDDIQUE

alihaidersiddique330@gmail.com | Toba Tek Singh, Pakistan | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Entry-level Computer Science student focused on Data Science and Artificial Intelligence, with hands-on experience building machine learning, data analysis, visualization, and recommendation-system projects. Proficient in Python and familiar with the end-to-end workflow from data cleaning and exploratory data analysis (EDA) to model development and deployment-oriented applications.

EDUCATION

Bachelor of Science in Computer Science — Currently Pursuing

Relevant coursework and study areas: Data Structures & Algorithms, Probability & Statistics, Linear Algebra, Databases, Machine Learning, Deep Learning, Data Visualization, and Time Series Analysis.

SKILLS

Programming: Python, SQL | **Data & ML:** Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn, TensorFlow | **Tools:** Jupyter, Google Colab, Git/GitHub, Streamlit | **Concepts:** EDA, data cleaning, data visualization, feature engineering, regression, classification, predictive modeling, time series analysis, deep learning, NLP, generative AI

PROJECTS

Movie Recommendation System | Python, Pandas, NumPy, Scikit-learn, CountVectorizer, Cosine Similarity, Streamlit, TMDB API

- Built a content-based movie recommendation system using TMDB metadata, combining movie overviews, genres, keywords, cast, and crew into searchable feature representations.
- Developed similarity-based recommendations with CountVectorizer and cosine similarity, then created a Streamlit interface with TMDB poster retrieval for an interactive user experience.

Fake News Detection — NLP Project | Python, Pandas, Scikit-learn, NLP, Machine Learning

- Developed an NLP-based classification workflow to identify potentially fake news from a real-world dataset, including data preprocessing, text feature preparation, model training, and evaluation.
- Applied machine learning and data-analysis techniques to transform unstructured news text into features suitable for predictive classification.

Climate Time Series Analysis | Python, Pandas, Matplotlib, Time Series Analysis

- Analyzed climate sensor time-series data using lag features such as previous-hour and previous-day temperature to study temporal patterns and dependencies.
- Performed data preparation and visualization to support time-aware analysis and predictive-modeling workflows.

EXPERIENCE

Currently building practical experience through academic and personal Data Science, Machine Learning, and AI projects.

CERTIFICATIONS

No certifications listed — can be added when verified credentials are available.
